APPLIED MATHEMATICS 10: GENERAL OUTCOMES, AND SPECIFIC OUTCOMES WITH ILLUSTRATIVE EXAMPLES, ORGANIZED BY STRAND AND SUBSTRAND

This section elaborates on the general outcomes and specific outcomes by providing illustrative examples, by strand and substrand, for the Applied Mathematics 10 course.

The coding for mathematical processes follows the same scheme as in the *Common Curriculum Framework*.

CLUSTERS IN THE APPLIED MATHEMATICS 10 COURSE

There are 5 clusters identified, each representing 20 to 25 hours of instructional time for an average student taking the cluster.

Common clusters, numbered C1 to C3, are part of the mathematics expected of all students completing a K to 12 mathematics program.

Applied clusters, numbered A1 to A2, emphasize applications of mathematics rather than precise mathematical theory. The approaches used are primarily numerical and geometrical.

CODING FOR ILLUSTRATIVE EXAMPLES (IEs)

The illustrative examples (IEs) listed on the following pages are organized by strand and substrand and have been correlated to specific outcomes (SOs). The numbers are taken directly from the *Common Curriculum Framework*.

NUMBERING SYSTEM

The specific outcomes are cross-referenced to the General Outcomes and Specific Outcomes section (pages 30 to 59 of the *Common Curriculum Framework*). For example, C2 – 6._(PR53) is the 6th specific outcome in Common Cluster 2 and the 53rd specific outcome in the Patterns and Relations strand.

Applied Mathematics 10

Strand: Number (Number Concepts)

Students will:

- use numbers to describe quantities
- represent numbers in multiple ways.

<i>(continued)</i>	<i>(continued)</i>	<p>1.1 <i>(continued)</i> Enter the data from the previous page onto a spreadsheet template provided to students.</p> <p>1.1.1 a) Calculate the dollar change in total sales, total operating expenses and total overhead expenses, between each year in the table. b) Which is the greatest dollar change?</p> <p>1.1.2 a) Calculate the percentage change in total sales, total operating expenses and total overhead expenses, between each year in the table. b) Which is the greatest percentage change?</p> <p>1.1.3 a) Determine the percentage change for each item for each year. b) Predict the figures for each type of income and expense for year 6, and predict the net profit for year 6.</p> <p>1.1.4 Prepare a line graph showing the annual sales, operating expenses and overhead expenses for the five year period. Use the graph to determine which item has the greatest rate of increase, and which item has the greatest rate of decrease.</p> <p>1.1.5 For the five year period, use a line of best fit procedure to determine equations of lines of best fit for total sales, total operating expenses and total overhead expenses. Use these equations to predict the values in year 6. From these values, predict the net profit in year 6.</p> <p>1.1.6 Calculate the net profit as a percentage of sales for each of the five years. In which year did the net profit represent the highest proportion of sales?</p> <p>1.1.7 Derive a formula relating total sales, total operating expenses, total overhead expenses, income tax and net profit.</p>

General Outcomes	Specific Outcomes	Illustrative Examples
<p><i>(continued)</i></p>	<p>A2-3. (SP4) Use technological devices to determine the correlation coefficient r. [T]</p> <p>A2-4. (SP5) Interpret the correlation coefficient r and its limitations for varying problem situations, using relevant scatterplots. [C, R, V]</p>	<p>3.1 Measure the height of each person in a class and the distance, from fingertip to fingertip, of their outstretched arms.</p> <ol style="list-style-type: none"> Record this data as a set of ordered pairs, with height as the first element and fingertip to fingertip distance as the second. Plot the data on a coordinate system. By examining the data, predict a value for the correlation coefficient r. Using a calculating tool, determine the correlation coefficient r for this data. <p>4.1 What do the following scatterplots and corresponding r-values represent?</p> <div style="display: flex; justify-content: space-around; align-items: flex-start;"> <div style="text-align: center;"> <p>Scatterplot (1)</p>  </div> <div style="text-align: center;"> <p>Scatterplot (2)</p>  </div> </div> <p>Scatterplot (1) is the plot of student marks on their last test against their shoe size. The value for r was calculated to be 0.2. Scatterplot (2) is the plot of student marks on their last test against the time spent studying. The value for r was calculated to be 0.8. Describe the relationship between the values of r and the shape of the scatterplots.</p>
